## Technical Support and Assistance

1. Visit the Advantech web site at [www.advantech.com/support](http://www.advantech.com/support) where you can find the latest information about the product.
2. Contact your distributor, sales representative, or Advantech's customer service center for technical support if you need additional assistance. Please have the following information ready before you call:
  - Product name and serial number
  - Description of your peripheral attachments
  - Description of your software (operating system, version, application software, etc.)
  - A complete description of the problem
  - The exact wording of any error messages

Part No.

# Warnings, Cautions and Notes

**Warning!** *Warnings indicate conditions, which if not observed, can cause personal injury!*

**Caution!** *Cautions are included to help you avoid damaging hardware or losing data. e.g.*

*There is a danger of a new battery exploding if it is incorrectly installed. Do not attempt to recharge, force open, or heat the battery. Replace the battery only with the same or equivalent type recommended by the manufacturer. Discard used batteries according to the manufacturer's instructions.*

**Note!** *Notes provide optional additional information.*

## Document Feedback

To assist us in making improvements to this manual, we would welcome comments and constructive criticism. Please send all such - in writing to: support@advantech.com

# Chapter 1

Command Line  
Interface

# 1.1 Using the Command-Line Interface

The Advantech IOS command-line interface (CLI) is the primary user interface used to configure, monitor, and maintain Advantech devices. The user interface allows you to directly execute CLI commands.

This chapter describes the basic features of the Advantech IOS CLI and how to use them. Topics covered include the following:

- Layer 2 features
- Multicast
- IGMP Snooping
- MLD Snooping
- Redundancy
- QoS
- Security
- Management
- Diagnostic

## 1.1.1 Initially Configuring a Device

The initial configuration of a device varies by platform. This document provides configuration information for the listed devices.

After initially configuring and connecting the device to the network, you can configure the device by using the remote access method, such as Telnet or Secure Shell (SSH), to access the CLI or by using the configuration method provided on the device, such as Security Device Manager.

## 1.1.2 Understanding Command Syntax

The command syntax is the format used for entering CLI commands. The commands are derived from the use of the command, keywords, and arguments. The keywords are alphanumeric strings used literally, while arguments are used as placeholders for required values.

## 1.1.3 Understanding Enable and Enable Secret Passwords

Some privileged EXEC commands are used for actions that impact the system, and it is recommended that you set a password for these commands to prevent unauthorized use. Two types of passwords, enable (not encrypted) and enable secret (encrypted), can be set.

The following commands set these passwords and are issued in global configuration mode:

- enable password
- enable secret password

## 1.1.4 Abbreviating Commands

Typing a complete command name is not always required for the command to execute. The CLI recognizes an abbreviated command when the abbreviation contains enough characters to uniquely identify the command. For example, the **show version** command can be abbreviated as **sh ver**. It cannot be abbreviated as **s ver** because **s** could mean **show**, **set**, or **systat**. The **sh v** abbreviation also is not valid because the show command has **vrrp** as a keyword in addition to **version**. (Command and keyword examples are from Cisco IOS Release 12.4(13)T.)

## 1.1.5 Using Aliases for CLI Commands

To save time and the repetition of entering the same command multiple times, you can use a command alias. An alias can be configured to do anything that can be done at the command line, but an alias cannot move between modes, type in passwords, or perform any interactive functions.

Table 1 shows the default command aliases.

**Table 1.1: Default Command Aliases**

| Command Alias | Original Command |
|---------------|------------------|
| h             | help             |
| lo            | logout           |
| P             | ping             |
| s             | show             |
| u or un       | undebug          |
| w             | where            |

## 1.2 L2 Features

### 1.2.1 Port Configuration

Table 1.2: Port Configuration

| Function  | Privilege  | Description   | Example  |
|---|------------|---|--|
| [no] shutdown   | Admin EXEC | Use "shutdown" command to disable port and use "no shutdown" to enable port. If port is error disabled for any reason, use "no shutdown" command to recover the port manually.  | This example shows how to modify port duplex configuration.<br>switch(config)# interface fa1<br>switch(config-if)# shutdown"   |
| speed (10 100)  | Admin EXEC | Use "speed" command to change port speed configuration. The speed is only able to configure to the physical maximum speed.  | This example shows how to modify port speed configuration.   |
| speed (1000 )   | Admin EXEC |   | switch(config)# interface fa2  |
| speed auto<br>[(10 100 10/100)]                                       | Admin EXEC | For example, in fast Ethernet port, speed 1000 is not available.  | switch(config-if)# speed auto 10/100   |
| duplex<br>(auto full half)  | Admin EXEC | Use "duplex" command to change port duplex configuration.   | This example shows how to modify port duplex configuration.<br>switch(config)# interface fa1<br>switch(config-if)# duplex full<br>switch(config-if)# exit<br>switch(config)# interface fa2<br>switch(config-if)# duplex half |
| description WORD<1-"<br>SYS_STR_CONST(SYS_<br>PORTDESC_STR_LEN)<br>"> | Admin EXEC | Use "description" command to give the port a name to identify it easily. If description includes space character, please use double quotes to wrap it.  | This example shows how to modify port descriptions.<br>switch(config)# interface fa2<br>switch(config-if)# description "uplink port"   |
| no description  | Admin EXEC | Use no form to restore description to empty string.   |  |
| [no] protected  | Admin EXEC | Use "protected" command to protect port. Protected port is only allowed to communicate with unprotected port. In other words, protected port is not allowed to communicate with another protected port.<br>Use no form to make port unprotected | This example shows how to configure ports fa1 and fa2 as protected ports.<br>switch(config)# interface range fa1-2<br>switch(config-if-range)# protected   |

### 1.2.2 MAC Address Table

Table 1.3: MAC Address Table

| Function                          | Privilege | Description                               | Example                                   |
|-----------------------------------|-----------|---|---|
| show mac address-table aging-time | User EXEC | View the aging time of the address table. | switch# show mac address-table aging-time |

**Table 1.3: MAC Address Table (Continued)**

| <b>Function</b>  | <b>Privilege</b> | <b>Description</b>   | <b>Example</b>  |
|--|------------------|--|---|
| show mac address-table A:B:C:D:E:F [vlan <1-4094>]                     | User EXEC        | Displays entries for a specific MAC address (for all or VLAN).   | switch# show mac address-table 0:1:2:3:4:5 vlan 1                             |
| show mac address-table [vlan <1-4094>] [interfaces IF_PORTS]           | User EXEC        | View MAC entry on specified interface or VLAN or all dynamic MAC entries in MAC address table.         | switch# show mac address-table vlan 1 interface fa5                           |
| show mac address-table static [vlan <1-4094>] [interfaces IF_PORTS]    | User EXEC        | View static MAC entry on specified interface or VLAN or all dynamic MAC entries in MAC address table.  | switch# show mac address-table static vlan 1 interface fa5                    |
| show mac address-table dynamic [vlan <1-4094>] [interfaces IF_PORTS]   | User EXEC        | View dynamic MAC entry on specified interface or VLAN or all dynamic MAC entries in MAC address table. | switch# show mac address-table dynamic vlan 1 interface fa5                   |
| show mac address-table counters  | User EXEC        | Display the number of addresses present in MAC address table.  | switch# show mac address-table counters                                       |
| clear mac address-table dynamic [interfaces IF_PORTS]                  | Admin EXEC       | Delete dynamic MAC entry on specified interface or all dynamic MAC entries in MAC address table.       | switch(config)# clear mac address-table dynamic interfaces fa5                |
| clear mac address-table dynamic vlan <1-4094>                          | Admin EXEC       | Delete dynamic MAC entry on specified VLAN dynamic MAC entry in MAC address table.                     | switch(config)# clear mac address-table dynamic vlan 1                        |
| mac address-table aging-time <10-630>                                  | Admin EXEC       | Set the aging time of the address table.   | switch(config)# mac address-table aging-time 300                              |
| mac address-table static A:B:C:D:E:F vlan <1-4094> interfaces IF_PORTS | Admin EXEC       | Add static addresses to the MAC address table.   | switch(config)# mac address-table static 0:1:2:3:4:5 vlan 1 interfaces fa5    |
| no mac address-table static A:B:C:D:E:F vlan <1-4094>                  | Admin EXEC       | Delete static addresses to the MAC address table.  | switch(config)# no mac address-table static 0:1:2:3:4:5 vlan 1 interfaces fa5 |

### 1.2.3 Jumbo Frame

**Table 1.4: Jumbo Frame**

| <b>Function</b>         | <b>Privilege</b> | <b>Description</b>  | <b>Example</b>   |
|-------------------------|------------------|---|--|
| jumbo-frame <1518-9216> | Admin EXEC       | Use "jumbo-frame" command to modify maximum frame size.<br>The only way to show this configuration is by using "show running-config" command. | This example shows how to modify maximum frame size to 9216 bytes.<br>switch(config)# jumbo-frame 9216 |
| no jumbo-frame          | Admin EXEC       | Use no form to disable jumbo-frame.   | switch(config)# no jumbo-frame   |

## 1.2.4 Flow Control

**Table 1.5: Flow Control**

| Function               | Privilege  | Description   | Example   |
|------------------------|------------|---|---|
| [no] back-pressure     | Admin EXEC | Use "back-pressure" command to change port back-pressure configuration.<br>Use no form to restore back-pressure to default (off) configuration. | This example shows how to modify port duplex configuration.<br>switch(config)# interface fa1<br>switch(config-if)# back-pressure<br>switch(config-if)# no back-pressure   |
| flowcontrol (off   on) | Admin EXEC | Use "flow-control" command to change port flow control configuration.<br>Use off form to restore flow control to default (off) configuration.   | This example shows how to modify port duplex configuration.<br>switch(config)# interface fa1<br>switch(config-if)# flow-control on<br>switch(config-if)# flow-control off |

## 1.2.5 Spanning Tree

**Table 1.6: Spanning Tree**

| Function   | Privilege  | Description   | Example   |
|--|------------|---|---|
| show spanning-tree [instance <0-15>]                     | User EXEC  | Show spanning-tree instance information.                        | switch# show spanning-tree instance 10  |
| show spanning-tree interfaces IF_PORTS [instance <0-15>] | User EXEC  | Show spanning-tree instance information per port.               | switch# show spanning-tree interface gi1 instance 10                                      |
| show spanning-tree User EXEC                             | User EXEC  | Show spanning-tree information.                                 | switch# show spanning-tree  |
| show spanning-tree interfaces IF_PORTS                   | User EXEC  | Show spanning-tree state of one port.                           | switch# show spanning-tree interface gi1  |
| show spanning-tree interfaces IF_PORTS statistic         | User EXEC  | Show spanning-tree statistics of one port.                      | switch# show spanning-tree interface gi1 statistic  |
| [no] spanning-tree                                       | Admin EXEC | Enable or Disable Spanning-Tree Protocol.                       | switch# configure<br>switch(config)# spanning-tree<br>switch(config)# exit                |
| spanning-tree bpdu (filtering flood-ing)                 | Admin EXEC | Specify the forwarding action of BPDU to filtering or flooding. | switch# configure<br>switch(config)# spanning-tree bpdu filtering<br>switch(config)# exit |
| no spanning-tree bpdu                                    | Admin EXEC | Restore to default bpdu action. Default action is flooding.     | switch# configure<br>switch(config)# no spanning-tree bpdu<br>switch(config)# exit"       |

**Table 1.6: Spanning Tree (Continued)**

| Function                                   | Privilege  | Description  | Example  |
|--|------------|--|--|
| spanning-tree mode (stp rstp mstp)         | Admin EXEC | Specify the mode to Spanning Tree Protocol.<br>Specify the mode to Rapid Spanning Tree Protocol.<br>Specify the mode to Multiple Spanning Tree Protocol. | switch# configure<br>switch(config)# spanning-tree mode stp<br>switch(config)# exit              |
| no spanning-tree force-version             | Admin EXEC | Restore to default stp version. Default stp version is rstp.   | switch# configure<br>switch(config)# no spanning-tree force-version<br>switch(config)# exit      |
| spanning-tree priority <0-61440>           | Admin EXEC | Specify the bridge priority; must use multiples of 4096.   | switch# configure<br>switch(config)# spanning-tree priority 16384<br>switch(config)# exit        |
| no spanning-tree priority                  | Admin EXEC | Restore to default priority. Default priority is 32768.  | switch# configure<br>switch(config)# no spanning-tree priority<br>switch(config)# exit           |
| spanning-tree hello-time <1-10>            | Admin EXEC | Specify the hello-time interval (second).  | switch# configure<br>switch(config)# spanning-tree hello-time 5<br>switch(config)# exit          |
| no spanning-tree hello-time                | Admin EXEC | Restore to default hello-time. Default hello-time is 2.  | switch# configure<br>switch(config)# no spanning-tree hello-time<br>switch(config)# exit         |
| spanning-tree forward-delay <4-30>         | Admin EXEC | Specify the forward-delay interval (seconds).  | switch# configure<br>switch(config)# spanning-tree forward-delay 30<br>switch(config)# exit      |
| no spanning-tree forward-delay             | Admin EXEC | Restore to default forward-delay. Default forward-delay is 15.   | switch# configure<br>switch(config)# no spanning-tree forward-delay<br>switch(config)# exit      |
| spanning-tree maximum-age <6-40>           | Admin EXEC | Specify the maximum-age time (second).   | switch# configure<br>switch(config)# spanning-tree maximum-age 10<br>switch(config)# exit        |
| no spanning-tree maximum-age               | Admin EXEC | Restore to default maximum-age. Default maximum-age is 20.   | switch# configure<br>switch(config)# no spanning-tree maximum-age<br>switch(config)# exit        |
| spanning-tree tx-hold-count <1-10>         | Admin EXEC | Specify the tx-hold-count value.   | switch# configure<br>switch(config)# spanning-tree tx-hold-count 10<br>switch(config)# exit      |
| no spanning-tree tx-hold-count             | Admin EXEC | Restore to default tx-hold-count. Default tx-hold-count is 6.  | switch# configure<br>switch(config)# no spanning-tree tx-hold-count<br>switch(config)# exit      |
| spanning-tree pathcost method (long short) | Admin EXEC | Specify the type of pathcost value as 32 bits (long).<br>Specify the type of pathcost value as 16 bits (short).  | switch# configure<br>switch(config)# spanning-tree pathcost method short<br>switch(config)# exit |

**Table 1.6: Spanning Tree (Continued)**

| Function                                  | Privilege  | Description   | Example   |
|---|------------|---|---|
| [no] spanning-tree                        | Admin EXEC | Enable or Disable Spanning-Tree Protocol per port.  | switch# configure<br>switch(config)# interface gi1<br>switch(config-if)# spanning-tree<br>switch(config-if)# exit<br>switch(config)# exit                             |
| spanning-tree port-priority <0-240>       | Admin EXEC | Specify the STP port priority; must use multiples of 4096.                                      | switch# configure<br>switch(config)# interface gi1<br>switch(config-if)# spanning-tree port-priority 64<br>switch(config-if)# exit<br>switch(config)# exit            |
| no spanning-tree port-priority            | Admin EXEC | Restore to default port-priority. Default port-priority is 128.                                 | switch# configure<br>switch(config)# interface gi1<br>switch(config-if)# no spanning-tree port-priority<br>switch(config-if)# exit<br>switch(config)# exit            |
| spanning-tree cost long <0-200000000>     | Admin EXEC | Specify the STP port cost. In long pathcost method, the range is from 0 to 20000000. (0 = Auto) | switch# configure<br>switch(config)# interface gi1<br>switch(config-if)# spanning-tree cost long 200000<br>switch(config-if)# exit<br>switch(config)# exit            |
| spanning-tree cost short <0-65535>        | Admin EXEC | Specify the STP port cost. In short pathcost method, the range is from 0 to 65535. (0 = Auto).  | switch# configure<br>switch(config)# interface gi1<br>switch(config-if)# spanning-tree cost short 1000<br>switch(config-if)# exit<br>switch(config)# exit             |
| no spanning-tree cost                     | Admin EXEC | Restore to default cost per port. Default cost is 0.  | switch# configure<br>switch(config)# interface gi1<br>switch(config-if)# no spanning-tree cost<br>switch(config-if)# exit<br>switch(config)# exit                     |
| [no] spanning-tree edge                   | Admin EXEC | Enable or Disable Spanning-Tree edge.   | switch# configure<br>switch(config)# interface gi1<br>switch(config-if)# spanning-tree edge<br>switch(config-if)# exit<br>switch(config)# exit                        |
| spanning-tree link-type point-to-point    | Admin EXEC | Specify the STP port link-type to point-to-point.   | switch# configure<br>switch(config)# interface gi1<br>switch(config-if)# spanning-tree link-type point-to-point<br>switch(config-if)# exit<br>switch(config)# exit    |
| no spanning-tree link-type point-to-point | Admin EXEC | Disabled the STP port link-type from point-to-point.  | switch# configure<br>switch(config)# interface gi1<br>switch(config-if)# no spanning-tree link-type point-to-point<br>switch(config-if)# exit<br>switch(config)# exit |

**Table 1.6: Spanning Tree (Continued)**

| <b>Function</b>  | <b>Privilege</b> | <b>Description</b>                             | <b>Example</b>   |
|--|------------------|--|--|
| spanning-tree mcheck   | Admin EXEC       | Specify the STP port to migrate port.          | switch# configure<br>switch(config)# interface gi1<br>switch(config-if)# spanning-tree mcheck<br>switch(config-if)# exit<br>switch(config)# exit |
| spanning-tree mst-config-id revision-level LEVEL<0-65535>        | Admin EXEC       | Specify the MSTP mst-config-id revision level. | switch# configure<br>switch(config)# spanning-tree mst-config-id revision-level 100<br>switch(config)# exit                                      |
| spanning-tree mst-config-id name NAME<32>                        | Admin EXEC       | Specify the MSTP mst-config-id name.           | switch# configure<br>switch(config)# spanning-tree mst-config-id name MST1<br>switch(config)# exit   |
| [no] spanning-tree instance-id INST<1-15>                        | Admin EXEC       | Create or delete MSTP instance ID.             | switch# configure<br>switch(config)# spanning-tree instance-id 10<br>switch(config)# exit  |
| spanning-tree instance-id INST<1-15> vlan (add remove) VLAN-LIST | Admin EXEC       | Add or remove VLAN from instance.              | switch# configure<br>switch(config)# spanning-tree instance-id 10 vlan add 10-20<br>switch(config)# exit   |
| spanning-tree instance-id INST<1-15> priority VALUE<0-61440>     | Admin EXEC       | Specify the instance priority.                 | switch# configure<br>switch(config)# spanning-tree instance-id 10 priority 1000<br>switch(config)# exit  |

## 1.2.6 VLAN

**Table 1.7: VLAN**

| <b>Function</b>                                    | <b>Privilege</b> | <b>Description</b>   | <b>Example</b>   |
|--|------------------|--|--|
| show vlan default-vlan                             | User EXEC        | Display information about default VLAN.                                    | switch# show vlan default-vlan   |
| show vlan VLAN-LIST interfaces IF_PORTS membership | User EXEC        | Display information about VLAN list.                                       | switch# show vlan 1 interfaces GigabitEthernet 10 membership                 |
| show vlan [(VLAN-LIST dynamic static)]             | User EXEC        | Display information about VLAN list or dynamic or static.                  | switch# show vlan 1<br>switch# show vlan dynamic<br>switch# show vlan static |
| show interfaces IF_PORTS                           | User EXEC        | Use "show interface" command to show port counters, parameters and status. | show interfaces GigabitEthernet 1  |
| show interfaces IF_PORTS status                    | User EXEC        | Use "show interface" command to show port status.                          | show interfaces GigabitEthernet 1 status                                     |
| show interfaces IF_PORTS protected                 | User EXEC        | Use "show interface" command to show port protected status.                | show interfaces GigabitEthernet 1 protected                                  |
| show interfaces switchport IF_PORTS                | User EXEC        | Use "show interface switchport" command to show port VLAN status.          | switch# show interfaces switchport GigabitEthernet 1                         |

**Table 1.7: VLAN (Continued)**

| Function  | Privilege  | Description  | Example  |
|---|------------|--|--|
| [no] vlan VLAN-LIST   | Admin EXEC | Create or remove a VLAN entry. Using "vlan" command to enter the VLAN configuration mode.  | switch (config)# vlan 100<br>switch (config)# no vlan 100  |
| name NAME   | Admin EXEC | Configure the name of a VLAN entry.  | switch(config)# vlan 100<br>switch(config-vlan)# name VLAN-one-hundred   |
| switchport mode hybrid  | Admin EXEC | Hybrid port: Support all functions as defined in IEEE 802.1Q specification.  | switch(config-if)# switchport mode hybrid  |
| show management-vlan  | User EXEC  | Display information about management VLAN.   | switch(config)# show management-vlan   |
| switchport hybrid pvid <1-4094>   | Admin EXEC | This command configures the hybrid port's PVID. Use "show interface switchport" command to show configuration.   | switch(config)# interface GigabitEthernet 1<br>switch(config-if)# switchport mode hybrid<br>switch(config-if)# switchport hybrid pvid 100                          |
| [no] switchport hybrid ingress-filtering                                | Admin EXEC | This command per port configures the ingress-filtering status. This filtering is used to filter the frames come from the non-member ingress port. Use "show interface switchport" command to show configuration. | switch(config)# interface GigabitEthernet 1<br>switch(config-if)# switchport mode hybrid<br>switch(config-if)# switchport hybrid ingress-filtering                 |
| switchport hybrid acceptable-frame-type (all tagged-only untagged-only) | Admin EXEC | This command per port configures the acceptable-frame-type. Use "show interface switchport" command to show configuration.   | switch(config)# interface GigabitEthernet 1<br>switch(config-if)# switchport mode hybrid<br>switch(config-if)# switchport hybrid acceptable-frame-type tagged-only |
| switchport hybrid allowed vlan add VLAN-LIST [(tagged untagged)]        | Admin EXEC | This command per hybrid port configures adds the allowed VLAN list. Use "show interface switchport" command to show configuration.   | switch(config)# interface GigabitEthernet 1<br>switch(config-if)# switchport mode hybrid<br>switch(config-if)# switchport hybrid allowed vlan add 1 tagged         |
| switchport hybrid allowed vlan remove VLAN-LIST                         | Admin EXEC | This command per hybrid port configures removes the allowed VLAN list. Use "show interface switchport" command to show configuration.  | switch(config)# interface GigabitEthernet 1<br>switch(config-if)# switchport mode hybrid<br>switch(config-if)# switchport hybrid allowed vlan remove 100           |
| [no] switchport default-vlan tagged                                     | Admin EXEC | This command per port configures the membership of the default VLAN to tagged. Use "show interface switchport" command to show configuration.  | switch(config)# interface GigabitEthernet 1<br>switch(config-if)# switchport mode hybrid<br>switch(config-if)# switchport default-vlan tagged                      |

**Table 1.7: VLAN (Continued)**

| <b>Function</b>  | <b>Privilege</b> | <b>Description</b>  | <b>Example</b>   |
|--|------------------|---|--|
| [no] switchport<br>forbidden default-<br>vlan                | Admin EXEC       | This command port configures the membership of the default VLAN to forbidden. Use "show interface switchport" command to show configuration.  | switch(config)# interface GigabitEthernet 1<br>switch(config-if)# switchport mode hybrid<br>switch(config-if)# switchport forbidden default-vlan   |
| switchport forbid-<br>den vlan<br>(add remove) VLAN-<br>LIST | Admin EXEC       | This command port configures the membership of the specified VLANs to forbidden. Use "show interface switchport" command to show configuration.   | switch(config)# interface GigabitEthernet 1<br>switch(config-if)# switchport mode hybrid<br>switch(config-if)# switchport forbidden vlan 100   |
| management-vlan<br>vlan <1-4094><br>no management-vlan       | Admin EXEC       | (1) Set <1-4094> as management VLAN ID; it is recommended to first create the VLAN and then assign the port to it.<br>(2) When using no command, restore management VLAN to default VLAN.<br>(3) To view the created management VLAN, use "show management-vlan". | (1) The following example specifies that management VLAN 2 is created.<br>switch(config)# management-vlan vlan 2<br>(2) The following example specifies that management-VLAN is restored to be default VLAN.<br>switch(config)# no management-vlan |

## 1.2.7 Q-in-Q

**Table 1.8: Q-in-Q**

| <b>Function</b>                    | <b>Privilege</b> | <b>Description</b>   | <b>Example</b>   |
|------------------------------------|------------------|--|--|
| switchport outer-<br>pvid <1-4094> | Admin EXEC       | This command configures the hybrid port's Outer PVID. Use "show interface switchport" command to show configuration.   | This example sets gi2's Outer PVID to 1024.<br>switch(config)# interface GigabitEthernet 2<br>switch(config-if)# switchport outerpvid 1024   |
| switchport qinq-<br>mode (nni uni) | Admin EXEC       | The qinqmode is used to configure the hybrid port for different port roles.<br>Nni: transfer frame will be add outer tag Vlan-Identifier<br>Uni: transfer frame will not be add outer tag Vlan-Identifier. | This example shows how to change gi1 to nni mode and gi2 to uni mode.<br>switch(config)# interface GigabitEthernet 1<br>switch(config-if)# switchport qinqmode nni<br>switch(config-if)# exit<br>switch(config)# interface GigabitEthernet 2<br>switch(config-if)# switchport qinqmode uni |
| vlan outertpid<br><0x0000-0xFFFF>  | Admin EXEC       | Use "vlan outertpid" command to change outer VLAN's Tag Protocol Identifier(tpid) configuration.   | This example shows how to modify Tag Protocol Identifier configuration.<br>switch(config)# vlan outertpid 0x9100   |

## 1.2.8 Link Aggregation

**Table 1.9: Link Aggregation**

| Function   | Privilege  | Description  | Example   |
|--|------------|--|---|
| show lag   | User EXEC  | Use "show lag" command to show current LAG load balance algorithm and members active/inactive status.  | This example shows how to show current LAG status.<br>switch# show lag  |
| lag load-balance (src-dst-mac src-dst-mac-ip src-port) | Admin EXEC | Link aggregation group port should transmit packets spread to all ports to balance traffic loading. Two algorithms are supported; use this command to select the required algorithm.   | This example shows how to change load balance algorithm to src-dst-mac-ip.<br>switch(config)# lag load-balance src-dst-mac-ip                                 |
| no lag load-balance                                    | Admin EXEC | Use no form to disable load-balance.   | This example shows how to disable load balance algorithm.<br>switch(config)# no lag load-balance  |
| lag <1-8> mode (static   active   passive)             | Admin EXEC | Link aggregation group function aggregates multiple physical ports into one logic port to increase bandwidth. This command makes normal port joins a normal port to a specific LAG logic port in static or dynamic mode.                             | This example shows how to create a dynamic LAG and join fa1-fa3 to this LAG.<br>switch(config)# interface range fa1-3<br>switch(config-if)# lag 1 mode active |
| no lag   | Admin EXEC | Use "no lag" to leave the LAG logic port.  | This example shows how to remove gi1 from LAG.<br>switch(config)# interface GigabitEthernet 1<br>switch(config-if)# no lag                                    |
| lacp system-priority <1-65535>                         | Admin EXEC | LACP system priority is used for two connected DUT to select master switch. Lower system priority value has higher priority. The DUT with higher priority can decide which ports are able to join the LAG.   | This example shows how to configure lacp system priority to 1000.<br>switch(config)# lacp system-priority 1000  |
| no lacp system-priority                                | Admin EXEC | Use "no lacp system-priority" to restore to the default priority value. Use "show running-config" command to show configuration.   | This example shows how to restore lacp system priority to default value.<br>switch(config)# no lacp system-priority   |
| lacp port-priority <1-65535>                           | Admin EXEC | LACP port priority is used for two connected DUT to select aggregation ports. Lower port priority value has higher priority. The port with higher priority will be selected into LAG first. Use "show running-config" command to show configuration. | This example shows how to configure interface fa1 lacp port priority to 100.<br>switch(config)# interface fa1<br>switch(config-if)# lacp port-priority 100    |

**Table 1.9: Link Aggregation (Continued)**

| <b>Function</b>           | <b>Privilege</b> | <b>Description</b>   | <b>Example</b>   |
|---------------------------|------------------|--|--|
| no lacp port-priority     | Admin EXEC       | Use no form to restore port-priority to default value.   |  |
| lacp timeout (long short) | Admin EXEC       | LACP must send LACP packet to partner switch to check the link status. This command configures the LACP packet sending interval. | This example shows how to configure interface fa1 lacp timeout to short.<br>switch(config)# interface fa1<br>switch(config-if)# lacp timeout short |
| no lacp timeout           | Admin EXEC       |  |  |

## 1.2.9 GARP

**Table 1.10: GARP**

| <b>Function</b>   | <b>Privilege</b> | <b>Description</b>               | <b>Example</b>   |
|---|------------------|----------------------------------|--|
| show garp   | User EXEC        | Display GARP status.             | switch# show garp  |
| garp join-time <6-600>                                      | Admin EXEC       | Set interval of join timer.      | switch(config)# garp join-time 10                        |
| garp leave-time <12-3000>                                   | Admin EXEC       | Set interval of leave timer.     | switch(config)# garp leave-time 30                       |
| garp leaveall-time <12-12000>                               | Admin EXEC       | Set interval of leave all timer. | switch(config)# garp leaveall-time 240                   |
| garp timer join <6-600> leave <12-3000> leaveall <12-12000> | Admin EXEC       | Set interval of all timers.      | switch(config)# garp timer join 10 leave 30 leaveall 240 |

## 1.2.10 GVRP

**Table 1.11: GVRP**

| <b>Function</b> | <b>Privilege</b> | <b>Description</b>               | <b>Example</b>       |
|-----------------|------------------|----------------------------------|----------------------|
| show gvrp       | User EXEC        | Display GVRP status.             | switch# show gvrp    |
| [no] gvrp       | Admin EXEC       | Enable or disable GVRP function. | switch(config)# gvrp |

## 1.2.11 Port Mirror

**Table 1.12: GVRP**

| <b>Function</b>  | <b>Privilege</b> | <b>Description</b>  | <b>Example</b>  |
|--|------------------|---|---|
| show mirror  | User EXEC        | Display all mirror session.   | switch# show mirror   |
| show mirror session <1-4>                                    | User EXEC        | Specify the mirror session to display.  | switch# show mirror session 1   |
| mirror session <1-4> source interfaces IF_PORTS (both rx tx) | Admin EXEC       | Specify the mirror session to configure.<br>Specify the source interface, include physical ports and LA port.<br>Specify the traffic direction to mirror. | switch# configure<br>switch(config)# mirror session 1 source interface fa2-5 both<br>switch(config)# exit |

**Table 1.12: GVRP (Continued)**

| <b>Function</b>   | <b>Privilege</b> | <b>Description</b>   | <b>Example</b>   |
|---|------------------|--|--|
| mirror session <1-4> destination interface IF_NMLPORT [allow-ingress] | Admin EXEC       | Specify the mirror session to configure.<br>Specify the SPAN destination. A destination must be a physical port.<br>Enable ingress traffic forwarding. | switch# configure<br>switch(config)# mirror session 1 destination interface fa1<br>switch(config)# exit      |
| no mirror session (<1-4> all)   | Admin EXEC       | Clear the configure of specified mirror session.<br>Clear the configure all of the mirror session.   | switch# configure<br>switch(config)# no mirror session 1<br>switch(config)# exit                             |
| no mirror session <1-4> destination interface IF_NMLPORT              | Admin EXEC       | Delete the destination interface of the mirror session.  | switch# configure<br>switch(config)# no mirror session 1 destination interface fa1<br>switch(config)# exit   |
| no mirror session <1-4> source interfaces IF_PORTS (both rx tx)       | Admin EXEC       | Delete the source interface of the mirror session.<br>Delete the traffic direction of the mirror port.   | switch# configure<br>switch(config)# no mirror session 1 source interface fa2-5 both<br>switch(config)# exit |

## 1.2.12 LLDP

**Table 1.13: LLDP**

| <b>Function</b>                                   | <b>Privilege</b> | <b>Description</b>  | <b>Example</b>  |
|---|------------------|---|---|
| show lldp   | User EXEC        | Display LLDP information.   | switch# show lldp                                     |
| show lldp interfaces IF_NMLPORTS                  | User EXEC        | Display LLDP information in sepcified ports.  | switch# show lldp interfaces fa5                      |
| show lldp local-device                            | User EXEC        | Display the local configuration.  | switch# show lldp local-device                        |
| show lldp interfaces IF_NMLPORTS local-device     | User EXEC        | Display the local configuration in specified ports.   | switch# show lldp interfaces fa5,fa6 local-device     |
| show lldp neighbor                                | User EXEC        | Display the neighbor's lldp information.  | switch# show lldp neighbor                            |
| show lldp interfaces IF_NMLPORTS neighbor         | User EXEC        | Display the neighbor's lldp information in specified ports.                                 | switch# show lldp interfaces fa5,fa6 neighbor         |
| show lldp statistics                              | User EXEC        | Display the LLDP RX/TX statistics.  | switch# show lldp statistics                          |
| show lldp interfaces IF_NMLPORTS statistics       | User EXEC        | Display the LLDP RX/TX statistics in specified ports.                                       | switch# show lldp interfaces fa5,fa6 statistics       |
| show lldp interfaces IF_NMLPORTS tlvs-overloading | User EXEC        | Display the length of LLDP TLVs and if the TLVs overload the PDU length in specified ports. | switch# show lldp interfaces fa5,fa6 tlvs-overloading |
| clear lldp statistics                             | Admin EXEC       | Clear statistics of LLDP.   | switch# clear lldp statistics                         |
| [no] lldp   | Admin EXEC       | Disable or enable LLDP.   | switch(config)# lldp                                  |
| [no] lldp tx                                      | Admin EXEC       | Per port disable or enable LLDP TX.   | switch(config-if)# lldp rx                            |

**Table 1.13: LLDP (Continued)**

| <b>Function</b>                                  | <b>Privilege</b> | <b>Description</b>   | <b>Example</b>  |
|--|------------------|--|---|
| [no] lldp rx                                     | Admin EXEC       | Per port disable or enable LLDP RX.  | switch(config-if)# lldp tx  |
| lldp holdtime-multiplier <2-10>                  | Admin EXEC       | Set the LLDP PDU hold multiplier that decides time-to-live (TTL) value sent in LLDP advertisements: TTL = (tx-interval * holdtime-multiplier).   | switch(config)# lldp holdtime-multiplier 4  |
| no lldp holdtime-multiplier                      | Admin EXEC       |  | switch(config)# no lldp holdtime-multiplier   |
| lldp tx-interval <5-32767>                       | Admin EXEC       | Set the LLDP TX interval.  | switch(config)# lldp tx-interval 30   |
| no lldp tx-interval                              | Admin EXEC       |  | switch(config)# no lldp tx-interval   |
| lldp reinit-delay <1-10>                         | Admin EXEC       | Set the LLDP re-initial delay. This delay avoids LLDP generating too many PDUs if the port is up and down frequently.  | switch(config)# lldp reinit-delay 2   |
| no lldp reinit-delay                             | Admin EXEC       |  | switch(config)# no lldp reinit-delay  |
| lldp tx-delay <1-8191>                           | Admin EXEC       | Set the delay in seconds between successive LLDP frame transmissions. The delay starts to count any time that LLDP PDU is sent, such as by LLDP PDU advertise routine, LLDP PDU content change, port link up, etc. | switch(config)# lldp tx-delay 2   |
| no lldp tx-delay                                 | Admin EXEC       |  | switch(config)# no lldp tx-delay  |
| lldp tlv-select pvid (enable disable)            | Admin EXEC       | This command per port configures the 802.1 PVID TLV attach enable status.  | switch(config-if)# lldp tlv-select pvid enable  |
| no lldp tlv-select pvid                          | Admin EXEC       |  | switch(config-if)# no lldp tlv-select pvid  |
| lldp tlv-select vlan-name (add remove) VLAN-LIST | Admin EXEC       | The commands per port add or remove VLAN list for 802.1 VLAN-NAME TLV.   | switch(config-if)# lldp tlv-select vlan-name add 1,2,3,4  |
| lldp tlv-select TLV [TLV] [TLV] [TLV] [TLV]      | Admin EXEC       | This command per port configures the selected TLV attaching in PDU.  | switch(config-if)# lldp tlv-select port-desc sys-name sys-desc sys-cap mac-phy lag max-frame-size management-addr |
| no lldp tlv-select                               | Admin EXEC       |  | switch(config-if)# no lldp tlv-select   |

**Table 1.13: LLDP (Continued)**

| <b>Function</b>                           | <b>Privilege</b> | <b>Description</b>  | <b>Example</b>                        |
|---|------------------|---|---------------------------------------|
| lldp lldpdu (filtering bridging flooding) | Admin EXEC       | This command globally configures the LLDP PDU handling behavior when LLDP is globally disabled. It should be noted that if LLDP is globally enabled and per port LLDP RX status is configured to disable, the received LLDP PDU is dropped instead of taking the global disable behavior. | switch(config)# lldp lldpdu filtering |
| no lldp lldpdu                            | Admin EXEC       |   | switch(config)# no lldp lldpdu        |

## 1.3 Multicast

### 1.3.1 IGMP Snooping

**Table 1.14: IGMP Snooping**

| <b>Function</b>                                    | <b>Privilege</b> | <b>Description</b>   | <b>Example</b>  |
|--|------------------|--|---|
| show ip igmp snooping                              | User EXEC        | This command will display IP IGMP snooping global info.                          | switch# show ip igmp snooping   |
| show ip igmp snooping router                       | User EXEC        | This command will display the IP IGMP router info.                               | switch# show ip igmp snooping router  |
| show ip igmp snooping groups [(dynamic   static)]  | User EXEC        | This command will display the IP IGMP groups for dynamic or static or all types. | switch# show ip igmp snooping groups<br>switch# show ip igmp snooping groups dynamic<br>switch# show ip igmp snooping groups static |
| show ip igmp snooping vlan [VLAN-LIST]             | User EXEC        | This command will display IP IGMP snooping VLAN info.                            | switch# show ip igmp snooping vlan  |
| show ip igmp snooping groups counters              | User EXEC        | This command will display the IP IGMP group counter include static group.        | switch# show ip igmp snooping counters  |
| show ip igmp snooping querier                      | User EXEC        | This command will display all of the static VLAN IP IGMP querier info.           | switch# show ip igmp snooping querier   |
| clear ip igmp snooping groups [(dynamic   static)] | Admin EXEC       | This command will clear the IP IGMP groups for dynamic or static or all types.   | switch# clear ip igmp snooping groups static  |
| clear ip igmp snooping statistics                  | Admin EXEC       | This command will clear the IP IGMP statistics.                                  | switch# clear ip igmp snooping statistics   |

**Table 1.14: IGMP Snooping (Continued)**

| Function  | Privilege  | Description  | Example  |
|---|------------|--|--|
| [no] ip igmp snooping                               | Admin EXEC | "No IP IGMP snooping" will clear all ip igmp snooping dynamic groups and dynamic router ports, and make the static IP IGMP group invalid. Subsequently, dynamic group and router port will not be learned via IGMP message.  | switch(config)# ip igmp snooping<br>switch(config)# no ip igmp snooping  |
| [no] ip igmp snooping report-suppression            | Admin EXEC | "No IP IGMP snooping report-suppression" will disable IGMP v1/v2 IGMP report suppression function. When received, report will be forwarded to the VLAN router ports.   | switch(config)# ip igmp snooping report-suppression<br>switch(config)# no ip igmp snooping report-suppression  |
| no ip igmp snooping vlan VLAN-LIST<br>group A.B.C.D | Admin EXEC | "IP IGMP snooping vlan 1 static-group 224.1.1.1 interfaces gi1" will add static group. The static group will not learn other dynamic ports. If the dynamic group exists, the static group will overlap the dynamic group. If the last member of the static group is removed, the static group will be deleted. To validate the static group, IGMP snooping VLAN and IP IGMP snooping must be enabled. Use "Show IP IGMP snooping group [(dynamic   static)]" command to display configuration. Use "No IP IGMP snooping vlan 1 group 224.1.1.1" command to delete the static group. The "clear ip igmp snooping groups" command can also be used to delete the static group. | switch(config)# ip igmp snooping vlan 1 static-group 224.1.1.1 interfaces gi1-2<br>switch(config)# ip igmp snooping vlan 1 static-group 224.1.1.1 interfaces gi1-2 |
| no ip unknown-multicast action                      | Admin EXEC | When IGMP snooping and MLD snooping are disabled, router port actions cannot be set. Disabling IGMP snooping & MLD snooping will flood multicast traffic to all members of the VLAN. When the action is a router port flood or drop, it will delete the unknown multicast group entry.   | switch(config)# ip unknown-multicast action router-port<br>switch(config)# no ip unknown-multicast action  |

**Table 1.14: IGMP Snooping (Continued)**

| Function  | Privilege  | Description   | Example   |
|---|------------|---|---|
| <pre>[no] ip igmp snooping vlan VLAN-LIST fastleave [no] ip igmp snooping vlan VLAN-LIST router learn pim-dvmrp ip igmp snooping vlan VLAN-LIST robustness-variable &lt;1-7&gt; no ip igmp snooping vlan VLAN-LIST robustness-variable ip igmp snooping vlan VLAN-LIST response-time &lt;5-20&gt; no ip igmp snooping vlan VLAN-LIST response-time ip igmp snooping vlan VLAN-LIST query-interval &lt;30-18000&gt; no ip igmp snooping vlan VLAN-LIST query-interval ip igmp snooping vlan VLAN-LIST last-member-query- interval &lt;1-25&gt; no ip igmp snooping vlan VLAN-LIST last-member-query- interval ip igmp snooping vlan VLAN-LIST last-member-query- count &lt;1-7&gt; no ip igmp snooping vlan VLAN-LIST last-member-query- count</pre> | Admin EXEC | "No IP IGMP snooping vlan 1 (last-member-query-count   last-member-query-interval   query-interval   response-time   robustness-variable)" will set the VLAN parameters to default. The CLI setting will change the IP IGMP VLAN parameters admin settings.                 | <pre>switch(config)# ip igmp snooping vlan 1 fastleave switch(config)# ip igmp snooping vlan 1 last-member-query-count 5 switch(config)# ip igmp snooping vlan 1 last-member-query-interval 3 switch(config)# ip igmp snooping vlan 1 query-interval 100 switch(config)# ip igmp snooping vlan 1 response-time 12 switch(config)# ip igmp snooping vlan 1 robustness-variable 4</pre> |
| <pre>[no] ip igmp snooping vlan VLAN-LIST</pre>   | Admin EXEC | "No IP IGMP snooping vlan 1" will clear all VLAN IP IGMP snooping dynamic groups and dynamic router ports, and invalidate any static IP IGMP groups with a VLAN ID of 1. Subsequently, the dynamic groups and router ports will not be learned via IGMP message for VLAN 1. | <pre>switch(config)# ip igmp snooping vlan 1</pre>  |

**Table 1.14: IGMP Snooping (Continued)**

| <b>Function</b>   | <b>Privilege</b> | <b>Description</b>  | <b>Example</b>                                  |
|---|------------------|---|---|
| ip igmp snooping version (2 3)  | Admin EXEC       | "IP IGMP snooping version 3" supports v3 basic mode. When the version changes from v3 to v2, all querier versions will update to version 2.     | switch(config)# ip igmp snooping version 3      |
| no ip igmp snooping vlan VLAN-LIST querier [version (2 3)]<br>ip igmp snooping vlan VLAN-LIST querier | Admin EXEC       | When IP IGMP vlan querier is enabled, a router selection process will be triggered. The selected router will send a general and specific query. | switch(config)# ip igmp snooping vlan 2 querier |

### 1.3.2 MLD Snooping

**Table 1.15: MLD Snooping**

| <b>Function</b>                                   | <b>Privilege</b> | <b>Description</b>   | <b>Example</b>   |
|---|------------------|--|--|
| show ip mld snooping                              | User EXEC        | This command will display IP MLD snooping global info.                                     | switch# show ip mld snooping   |
| show ip mld snooping router                       | User EXEC        | This command will display the IP MLD router info.  | switch# show ip mld snooping router  |
| show ip mld snooping groups [(dynamic   static)]  | User EXEC        | This command will display the IP MLD groups for dynamic or static ports, or for all types. | switch# show ip mld snooping groups<br>switch# show ip mld snooping groups dynamic<br>Switch# show ip mld snooping groups static |
| show ip mld snooping vlan [VLAN-LIST]             | User EXEC        | This command will display IP MLD snooping VLAN info.                                       | switch# show ip mld snooping vlan  |
| show ip mld snooping groups counters              | User EXEC        | This command will display the IP MLD group counter include static group.                   | switch# show ip mld snooping counters  |
| show ip mld snooping querier                      | User EXEC        | This command will display all of the static VLAN IP MLD querier info.                      | switch# show ip mld snooping querier   |
| clear ip mld snooping groups [(dynamic   static)] | Admin EXEC       | This command will clear the IP MLD groups for dynamic or static ports, or for all types.   | switch# clear ip mld snooping groups static  |
| clear ip mld snooping statistics                  | Admin EXEC       | This command will clear the MLD statistics.  | switch# clear ip mld snooping statistics   |

**Table 1.15: MLD Snooping (Continued)**

| Function   | Privilege  | Description   | Example   |
|--|------------|---|---|
| [no] ip mld snoop-   | Admin EXEC | "No IP MLD snooping" will clear all IP MLD snooping dynamic groups and dynamic router ports, and make the static IP MLD group invalid. Subsequently, the dynamic group and router ports will not be learned via MLD message.  | switch(config)# ip mld snooping<br>switch(config)# no ip mld snooping   |
| [no] ip mld snoop-   | Admin EXEC | "No IP MLD snooping report-suppression" will disable MLD v1/v2 MLD report suppression function. Reports received will be forwarded to the VLAN router ports.  | switch(config)# ip mld snooping report-suppression<br>switch(config)# no ip mld snooping report-suppression   |
| ing vlan VLAN-LIST<br>static-group<br>X:X::X:X interfaces IF_PORTS<br>no ip mld snooping<br>vlan VLAN-LIST<br>group X:X::X:X | Admin EXEC | "IP MLD snooping vlan 1 static-group ff0e:dd::00:dd interfaces gi1" will add static group.<br>The static group will not learn other dynamic ports. If the dynamic group exists, the static group will overlap the dynamic group. If the last member of the static group is removed, the static group will be deleted.<br>For the static group to be valid, IGMP snooping VLAN and IP IGMP snooping must both be enabled.<br>Use "Show IP IGMP snooping group [(dynamic   static)]" to display the configuration. Use "No IP MLD snooping vlan 1 group ff0e:dd::00:dd" or "Clear IP MLD snooping groups" to delete the static group. | switch(config)# ip mld snooping vlan 1 static-group ff0e:dd::00:dd interfaces gi1-2<br>switch(config)# no ip mld snooping vlan 1 group ff0e:dd::00:dd<br>switch(config)# clear ip mld snooping groups |

**Table 1.15: MLD Snooping (Continued)**

| Function  | Privilege  | Description  | Example   |
|---|------------|--|---|

## 1.5 QoS

### 1.5.1 Rate Limit

**Table 1.17: Rate Limit**

| Function                                   | Privilege  | Description  | Example  |
|--|------------|--|--|
| show rate-limit                            | User EXEC  | Display rate-limit information.                        | switch# show rate-limit                            |
| show rate-limit interfaces IF_NMLPORTS     | User EXEC  | Display rate-limit information in specified interface. | switch# show rate-limit interfaces fa 5            |
| rate-limit ingress <16-1000000>            | Admin EXEC | Set ingress rate-limit.                                | switch(config-if)# rate-limit ingress 10000        |
| no rate-limit ingress                      | Admin EXEC | No ingress rate-limit.                                 | switch(config-if)# no rate-limit ingress           |
| rate-limit egress <16-1000000>             | Admin EXEC | Set egress rate-limit.                                 | switch(config-if)# rate-limit egress 10000         |
| no rate-limit egress                       | Admin EXEC | No egress rate-limit.                                  | switch(config-if)# no rate-limit egress            |
| rate-limit egress queue <1-8> <16-1000000> | Admin EXEC | Set egress rate-limit in queue.                        | switch(config-if)# rate-limit egress queue 3 10000 |
| no rate-limit egress queue <1-8>           | Admin EXEC | No egress rate-limit in queue.                         | switch(config-if)# no rate-limit egress queue 3    |

### 1.5.2 QoS

**Table 1.18: QoS**

| Function   | Privilege  | Description  | Example  |
|--|------------|--|--|
| show qos   | User EXEC  | Display qos state.   | switch# show qos   |
| show qos queueing  | User EXEC  | Display qos queueing state.  | switch# show qos queueing  |
| show qos interfaces IF_PORTS   | User EXEC  | Display qos state by interface.  | switch# show qos interface gi1   |
| show qos map [ (cos-queue dscp-queue precedence-queue queue-cos queue-dscp queue-precedence) ] | User EXEC  | Display qos map detail.  | switch# show qos map   |
| [no] qos   | Admin EXEC | Enabled or disabled the device to qos mode.  | switch# configure<br>switch(config)# qos<br>switch(config)# exit                             |
| qos queue strict-priority-num <0-8>  | Admin EXEC | Specify the strict priority queue number.  | switch# configure<br>switch(config)# qos queue strict-priority-num 1<br>switch(config)# exit |
| qos queue weight SEQUENCE  | Admin EXEC | Specify the non-strict priority queue weight value. The valid queue weight value is from 1 to 127. | switch# configure<br>switch(config)# qos queue weight 3<br>switch(config)# exit              |

**Table 1.18: QoS (Continued)**

| <b>Function</b>   | <b>Privilege</b> | <b>Description</b>   | <b>Example</b>  |
|---|------------------|--|---|
| <code>qos map cos-queue SEQUENCE to &lt;1-8&gt;</code>        | Admin EXEC       | Configure or show CoS to queue map   | switch# configure<br>switch(config)# qos map cos-queue 6 7 to 1<br>switch(config)# exit   |
| <code>qos map dscp-queue SEQUENCE to &lt;1-8&gt;</code>       | Admin EXEC       | Configure or show DSCP to queue map.   | switch# configure<br>switch(config)# qos map dscp-queue 6 7 to 1<br>switch(config)# exit  |
| <code>qos map precedence-queue SEQUENCE to &lt;1-8&gt;</code> | Admin EXEC       | Configure or show IP Precedence to queue map.  | switch# configure<br>switch(config)# qos map precedence-queue 6 7 to 1<br>switch(config)# exit  |
| <code>qos trust (cos cos-dscp dscp precedence)</code>         | Admin EXEC       | Specify the device to trust CoS.<br>Specify the device to trust DSCP for IP packets, and trust CoS for non-IP packets.<br>Specify the device to trust DSCP.<br>Specify the device to trust IP Precedence | switch# configure<br>switch(config)# qos trust cos<br>switch(config)# qos trust dscp<br>switch(config)# exit  |
| <code>no qos trust</code>                                     | Admin EXEC       | Clear qos trust configure.   | switch# configure<br>switch(config)# no qos trust<br>switch(config)# exit   |
| <code>qos cos &lt;0-7&gt;</code>                              | Admin EXEC       | Specify the CoS value for the interface.   | switch# configure<br>switch(config)# interface gi1<br>switch(config-if)# qos cos 1<br>switch(config-if)# exit<br>switch(config)# exit                         |
| <code>[no] qos trust</code>                                   | Admin EXEC       | Enabled or disabled the qos mode per port.   | switch# configure<br>switch(config)# interface gi1<br>switch(config-if)# qos<br>switch(config-if)# exit<br>switch(config)# exit                               |
| <code>qos map queue-cos SEQUENCE to &lt;0-7&gt;</code>        | Admin EXEC       | Configure or show CoS to queue map.  | switch# configure<br>switch(config)# interface gi1<br>switch(config-if)# qos map cos-queue 6 7 to 1<br>switch(config-if)# exit<br>switch(config)# exit        |
| <code>qos map queue-dscp SEQUENCE to &lt;0-63&gt;</code>      | Admin EXEC       | Configure or show DSCP to queue map.   | switch# configure<br>switch(config)# interface gi1<br>switch(config-if)# qos map dscp-queue 6 7 to 1<br>switch(config-if)# exit<br>switch(config)# exit       |
| <code>qos map queue-pre-SEQUENCE to &lt;0-7&gt;</code>        | Admin EXEC       | Configure or show IP Precedence to queue map.  | switch# configure<br>switch(config)# interface gi1<br>switch(config-if)# qos map precedence-queue 6 7 to 1<br>switch(config-if)# exit<br>switch(config)# exit |

**Table 1.18: QoS (Continued)**

| Function                                 | Privilege  | Description | Example |
|--|------------|-------------|---------|
| [no] qos remark<br>(cos dscp precedence) | Admin EXEC |             |         |

## 1.6 Security

### 1.6.1 Loop Detection / Prevention

**Table 1.19: Loop Detection / Prevention**

| Function  | Privilege  | Description   | Example   |
|---|------------|---|---|
| show loopback-detection                           | User EXEC  | Display loopback-detection global status.                 | switch# show loopback-detection   |
| show loopback-detection interfaces IF_PORTS state | User EXEC  | Display loopback-detection status of specified ports.     | show loopback-detection interfaces GigabitEthernet 1,2 state                      |
| [no] loopback-detection                           | Admin EXEC | Enable or disable loopback-detection.                     | switch(config)# loopback-detection<br>switch(config)# no loopback-detection       |
| loopback-detection interval <1-32767>             | Admin EXEC | Set loopback detection interval.                          | switch(config)# loopback-detection interval 1                                     |
| loopback-detection recover-time <60-1000000>      | Admin EXEC | Set block port recover time.                              | switch(config)# loopback-detection recover-time 60                                |
| [no] loopback-detection                           | Admin EXEC | Enable or disable loopback-detection of a specified port. | switch(config-if)# loopback-detection<br>switch(config-if)# no loopback-detection |

### 1.6.2 Storm Control

**Table 1.20: Storm Control**

| Function                                  | Privilege  | Description   | Example                                   |
|---|------------|---|---|
| show storm-control                        | User EXEC  | Display storm-control information.  | switch# show storm-control                |
| show storm-control interfaces IF_NMLPORTS | User EXEC  | Display storm-control information in specified interface.                                       | switch# show storm-control interfaces fa5 |
| storm-control ifg (include exclude)       | Admin EXEC | Decide whether to include/exclude the preamble and inter frame gap into the calculation or not. | switch(config)# storm-control ifg include |
| storm-control unit (bps pps)              | Admin EXEC | Set the unit of calculation method.   | switch(config)# storm-control unit bps    |
| [no] storm-control                        | Admin EXEC | Disable or enable storm-control.  | switch(config)# storm-control             |

**Table 1.20: Storm Control (Continued)**

| <b>Function</b>   | <b>Privilege</b> | <b>Description</b>   | <b>Example</b>  |
|---|------------------|--|---|
| [no] storm-control (broadcast unknown-unicast unknown-multicast)              | Admin EXEC       | Disable or enable storm-control type.  | switch(config-if)# storm-control broadcast            |
| storm-control (broadcast unknown-unicast unknown-multicast) level <1-1000000> | Admin EXEC       | Set control rate of storm-control type.  | switch(config-if)# storm-control broadcast level 1000 |
| no storm-control (broadcast unknown-unicast unknown-multicast) level          | Admin EXEC       | No control rate of storm-control type.   | switch(config-if)# no storm-control broadcast level   |
| storm-control action (drop shutdown)  | Admin EXEC       | The storm control mechanism drops packets which exceed storm control rate or just shuts down the port. | switch(config-if)# storm-control action shutdown      |
| no storm-control action   | Admin EXEC       | Set action to drop.  | switch(config-if)# no storm-control action            |

### 1.6.3 Port Security

**Table 1.21: Port Security**

| <b>Function</b>                            | <b>Privilege</b> | <b>Description</b>   | <b>Example</b>   |
|--|------------------|--|--|
| show port-security                         | User EXEC        | Display port-security status.  | switch# show port-security   |
| [no] port-security [learning-limit <0-64>] | Admin EXEC       | Enable port security of a port and specify a maximum FDB learning number of that port.<br>Disable port security. | switch(config-if)# port-security learning-limit 5<br>switch(config-if)# no port-security |
| [no] mac-violation-notify                  | Admin EXEC       | When a port reaches its maximum FDB learning number, the system will send to SNMP trap for a new MAC.            | switch(config-if)# mac-violation-notify<br>switch(config-if)# no mac-violation-notify    |

### 1.6.4 802.1X

**Table 1.22: 802.1X**

| <b>Function</b>   | <b>Privilege</b> | <b>Description</b>  | <b>Example</b>                                |
|-------------------|------------------|---|---|
| show dot1x status | User EXEC        | Show Dot1x configuration.   | switch# show dot1x                            |
| [no] dot1x        | Admin EXEC       | Configure radius server enable/disable.<br>The "dot1x" command globally enable 802.1x ability.<br>The "no dot1x run" command disables the 802.1x ability. | switch#show dot1x<br>switch(config)# no dot1x |

**Table 1.22: 802.1X (Continued)**

| <b>Function</b>   | <b>Privilege</b> | <b>Description</b>                                | <b>Example</b>   |
|---|------------------|---|--|
| dot1x authentication-based (port   mac)   | Admin EXEC       | Configure radius server authentication mode.      | switch(config)# dot1x authentication-based port<br>switch(config)# dot1x authentication-based mac  |
| dot1x authentication-port IF_PORTS sectype (authorize   disable)                                      | Admin EXEC       | Configure radius server authentication port.      | switch(config)# dot1x authentication-port FastEthernet 1 sectype authorize<br>switch(config)# dot1x authentication-port FastEthernet 1 sectype disable |
| dot1x sys-configuration ip X.X.X.X radius-port <1-65535> accounting-port <1-65535> secret WORD<0-128> | Admin EXEC       | Configure radius server IP & port and secret key. | switch(config)# dot1x sys-configuration ip 192.168.1.100 radius-port 1812 accounting-port 1813 secret 12345678   |
| dot1x misc-configuration reauth-period <1-65535>  | Admin EXEC       | Configure radius server reauth period.            | switch(config)# dot1x misc-configuration reauth-period 3600  |

## 1.6.5 Remote Authentication

**Table 1.23: Remote Authentication**

| <b>Function</b>   | <b>Privilege</b> | <b>Description</b>   | <b>Example</b>   |
|---|------------------|--|--|
| show security-login   | User EXEC        | Show security login configuration.   | switch# show security-login  |
| [no] security-login   | Admin EXEC       | Use "security-login" command to enable security-login services.<br>Use no form to disable service. | switch(config)# security-login<br>switch(config)# no security-login                      |
| security-login radius-config ip X.X.X.X port <1-65535> secret WORD<0-128> | Admin EXEC       | Configure radius login access control.   | switch(config)# security-login radius-config ip 192.168.1.100 port 1812 secret 12345678  |
| security-login tacacs-config ip X.X.X.X port <1-65535> secret WORD<0-128> | Admin EXEC       | Configure security login access control.   | switch(config)# security-login rtacacs-config ip 192.168.1.100 port 1812 secret 12345678 |
| security-login access-control (http   telnet   ssh   all)                 | Admin EXEC       | Configure security login access control.   | switch(config)# security-login access-control http                                       |
| no security-login access-control (http   telnet   ssh   all)              | Admin EXEC       | Reset security login access control.   | switch(config)# no security-login access-control   |

**Table 1.23: Remote Authentication (Continued)**

| <b>Function</b>   | <b>Privilege</b> | <b>Description</b>             | <b>Example</b>                                      |
|---|------------------|--------------------------------|---|
| security-login<br>login-type (radius<br>  tacacs   both  <br>all) | Admin EXEC       | Configure security login type. | switch(config)# security-login<br>login-type radius |
| no security-login<br>login-type                                   | Admin EXEC       | Reset security login type.     | switch(config)# no security-login<br>login-type     |

## 1.6.6 One Time Password

**Table 1.24: One Time Password**

| <b>Function</b>  | <b>Privilege</b> | <b>Description</b>   | <b>Example</b>   |
|--|------------------|--|--|
| show otp   | User EXEC        | Show otp configuration.  | switch# show otp   |
| [no] otp   | Admin EXEC       | Use "otp" command to enable otp services.<br>Use no form to disable service. | switch(config)# otp<br>switch(config)# no otp  |
| otp secure-key-mode (one-time-used   time-restricted)            | Admin EXEC       | Configure otp secure key mode.   | switch(config)# otp secure-key-mode one-time-used<br>switch(config)# otp secure-key-mode time-restricted |
| otp interval <3600-86400>  | Admin EXEC       | Configure otp survival time.   | switch(config)# otp interval   |
| otp display-mode (attempt-failed   fixed-display)                | Admin EXEC       | Configure otp display mode.  | switch(config)# otp display-mode attempt-failed<br>switch(config)# otp display-mode fixed-display        |
| otp ssh-first-phase-auth username WORD<1-32> password WORD<1-32> | Admin EXEC       | Configure otp ssh login information.   | switch(config)# otp ssh-first-phase-auth username admin<br>password 12345678                             |

## 1.6.7 Account Manager

**Table 1.25: Account Manager**

| <b>Function</b>  | <b>Privilege</b> | <b>Description</b>   | <b>Example</b>   |
|--|------------------|--|--|
| show username  | User EXEC        | Show all user accounts in local database.  | switch# show username  |
| show privilege   | User EXEC        | Show current privilege level.  | switch# show privilege                                       |
| username WORD<0-32> [privilege (admin user)] (password WORD<0-32>)   ( secret [encrypted] WORD<0-32>)   nopassword | Admin EXEC       | Use "username" command to add a new user account or edit an existing user account. | switch(config)# username test<br>privilege admin secret 1234 |
| no username WORD<0-32>   | Admin EXEC       | Delete an existing user account.   | switch(config)# no username test                             |

**Table 1.25: Account Manager (Continued)**

| <b>Function</b>  | <b>Privilege</b> | <b>Description</b>   | <b>Example</b>                     |
|--|------------------|--|------------------------------------|
| enable (password  <br>(secret<br>[encrypted]))<br>PASSWORD | Admin EXEC       | Edit password for each privilege level to enable authentication. | switch(config)# enable secret 1234 |
| no enable  | Admin EXEC       | Restore enable password to default empty value.                  | switch(config)# no enable          |

### 1.6.8 DoS Attack Prevention

**Table 1.26: DoS Attack Prevention**

| <b>Function</b>   | <b>Privilege</b> | <b>Description</b>  | <b>Example</b>  |
|---|------------------|---|---|
| show dos  | User EXEC        | Show current dos global state.                            | switch# show dos  |
| show dos interfaces IF_PORTS  | User EXEC        | Show dos configuration on selected ports.                 | switch# show dos interfaces GigabitEthernet 1                       |
| [no] dos (tcp-frag-off-min-check synrst-denry synfin-denry xma-denry nullscan-denry syn-sport11024-denry tcpchk-min-check smurf-denry icmfping6-max-check icmfping4-ping-max-check icmp-frag-pkts-denry ipv6-min-frag-size-check pod-denry tcpblat-denry udpblat-denry land-denry daeqsa-denry) | Admin EXEC       | Configure DUT to enable/disable support types of attacks. | switch(config)# no dos land-denry<br>switch(config)# dos land-denry |

### 1.6.9 IP Security

**Table 1.27: IP Security**

| <b>Function</b>  | <b>Privilege</b> | <b>Description</b>               | <b>Example</b>              |
|------------------|------------------|----------------------------------|-----------------------------|
| show ip-security | User EXEC        | Display IP security information. | switch# show ip-security    |
| [no] ip-security | Admin EXEC       | Disable or enable IP security.   | switch(config)# ip-security |

**Table 1.27: IP Security (Continued)**

| <b>Function</b>  | <b>Privilege</b> | <b>Description</b>  | <b>Example</b>   |
|--|------------------|---|--|
| ip-security ip<br>A.B.C.D mask<br>A.B.C.D [service ( ping   http   https   telnet   ssh   snmp ) state (enable   disable)] | Admin EXEC       | Add a specified IP (and service) entry for IP security usage. | switch(config)# ip-security ip 192.168.1.1 mask 255.255.0.0<br>service ping state enable |
| no ip-security ip<br>A.B.C.D mask<br>A.B.C.D   | Admin EXEC       | Remove specified IP security entry.                           | switch(config)# no ip-security ip 192.168.1.1 mask 255.255.0.0                           |

## 1.7 Management

### 1.7.1 IP Management

**Table 1.28: IP Management**

| <b>Function</b>                   | <b>Privilege</b> | <b>Description</b>  | <b>Example</b>  |
|-----------------------------------|------------------|---|---|
| show ip                           | User EXEC        | Show system IPv4 address, net mask and default gateway.   | switch# show ip   |
| show ip dhcp                      | User EXEC        | Show IPv4 DHCP client enable state.   | switch# show ip dhcp  |
| show auto-ip                      | User EXEC        |   |   |
| [no] ip dhcp                      | Admin EXEC       | Use "IP DHCP" command to enable DHCP client to get IP address from remote DHCP server.<br>Use "No IP DHCP" command to disable DHCP client and use static IP address.                                      | switch(config)# ip dhcp<br>switch(config)# no ip dhcp       |
| ip address A.B.C.D [mask A.B.C.D] | Admin EXEC       | Modify administration IPv4 address.   | switch(config)# ip address 192.168.1.200 mask 255.255.255.0 |
| default-gateway A.B.C.D           | Admin EXEC       | Modify default gateway address.   | switch(config)# ip default-gateway 192.168.1.100            |
| show ipv6 dhcp                    | User EXEC        | Show system IPv6 DHCP client enable state.  | switch# show ipv6 dhcp                                      |
| show ipv6                         | User EXEC        | Show system IPv6 address, net mask, default gateway and auto config state.  | switch# show ipv6   |
| [no] ipv6 dhcp                    | Admin EXEC       | Use "IPv6 DHCP" command enable DHCPv6 client to get IP address from remote DHCPv6 server.<br>Use "No IPv6 DHCP" command to disable DHCPv6 client and use static IPv6 address or IPv6 auto config address. | switch(config)# ipv6 dhcp                                   |

**Table 1.28: IP Management (Continued)**

| <b>Function</b>                      | <b>Privilege</b> | <b>Description</b>   | <b>Example</b>  |
|--------------------------------------|------------------|--|---|
| [no] ipv6 autocon-                   | Admin EXEC       | Use "IPv6 autoconfig" command to enable IPv6 auto configuration feature.     | switch(config)# no ipv6 autoconfig                              |
| fig                                  |                  | Use "No IPv6 autoconfig" command to disable IPv6 auto configuration feature. |   |
| ipv6 address X:X::X:X prefix <0-128> | Admin EXEC       | Use "IPv6 address" command to specify static IPv6 address.                   | switch(config)# ipv6 address fe80::20e:2eff:fe1:4b3c prefix 128 |
| ipv6 default-gateway X:X::X:X        | Admin EXEC       | Use "IPv6 default-gateway" command to modify default gateway IPv6 address.   | switch(config)# ipv6 default-gateway fe80::dcad:beff:feef:103   |

## 1.7.2 SNMP

**Table 1.29: SNMP**

| <b>Function</b>   | <b>Privilege</b> | <b>Description</b>  | <b>Example</b>  |
|---|------------------|---|---|
| show snmp   | User EXEC        | Display snmp state.   | switch# show snmp   |
| show snmpv3   | User EXEC        | Display SNMPv3 configure state.   | switch# show snmpv3   |
| show snmp trap  | User EXEC        | Display SNMP trap setting.  | switch# show snmp trap  |
| [no] snmp   | Admin EXEC       | Enable or disabled SNMP engine.   | switch# configure<br>switch(config)# snmp<br>switch(config)# exit                                       |
| [no] snmp trap (auth linkUp-Down warm-start cold-start port-security) | Admin EXEC       | Specify snmp trap setting.  | switch# configure<br>switch(config)# snmp trap auth<br>switch(config)# exit                             |
| snmp community NAME (ro rw)   | Admin EXEC       | Snmp v1/v2 community name.<br>Snmp community read or readwrite attribute for basic mode.                | switch# configure<br>switch(config)# snmp community user rw<br>switch(config)# exit                     |
| no snmp community NAME  | Admin EXEC       | Delete SNMP community name.   | switch# configure<br>switch(config)# no snmp community user<br>switch(config)# exit                     |
| snmp host (A.B.C.D X:X::X:X HOSTNAME) [version (1 2c)] NAME           | Admin EXEC       | Snmp trap host IPv4/IPv6 address or host name.<br>v1/v2c/v3 traps.<br>Snmp community name or user name. | switch# configure<br>switch(config)# snmp host 192.168.1.100 version 2c private<br>switch(config)# exit |
| no snmp host (A.B.C.D X:X::X:X HOSTNAME) [version (1 2c)]             | Admin EXEC       | Delete SNMP host.   | switch# configure<br>switch(config)# no snmp host 192.168.1.100 version 2c<br>switch(config)# exit      |

**Table 1.29: SNMP (Continued)**

| <b>Function</b>   | <b>Privilege</b> | <b>Description</b>   | <b>Example</b>  |
|---|------------------|--|---|
| snmpv3 user NAME<br>(ro rw) auth<br>(md5 sha) pass-<br>word WORD<8-32><br>priv password<br>WORD<8-32> | Admin EXEC       | SNMPv3 user name.<br>SNMPv3 user read or read-<br>write attribute for basic<br>mode.<br>SNMPv3 user security<br>level, auth-protocol, prvi-<br>protocol. | switch# configure<br>switch(config)# snmpv3 user<br>root rw auth md5 password<br>12345678<br>switch(config)# exit |
| no snmpv3 user<br>NAME  | Admin EXEC       | Delete SNMPv3 user name.   | switch# configure<br>switch(config)# no snmp user<br>root<br>switch(config)# exit                                 |

### 1.7.3 Configuration Management

**Table 1.30: Configuration Management**

| <b>Function</b>   | <b>Privilege</b> | <b>Description</b>   | <b>Example</b>   |
|---|------------------|--|--|
| show (startup-con-<br>fig running-con-<br>fig)                | Admin EXEC       | Show startup/running con-<br>figuration.                                     | switch# show startup-config<br>switch# show running-config                         |
| show running-con-<br>fig interfaces<br>IF_PORTS               | Admin EXEC       | Show running configuration<br>on selected ports.                             | switch# show running-config<br>interfaces GigabitEthernet 1                        |
| copy running-con-<br>fig (startup-con-<br>fig )               | Admin EXEC       | Copy running configuration<br>to startup configuration.                      | switch# copy running-config<br>startupst-config                                    |
| copy (running-con-<br>fig startup-con-<br>fig) tftp://        | Admin EXEC       | Copy running/startup con-<br>figuration to remote tftp<br>server.            | switch# copy running-config<br>startupst-config tftp://<br>192.168.1.111/test1.cfg |
| copy tftp:// (run-<br>ning-con-<br>fig startup-<br>config)    | Admin EXEC       | Upgrade running/startup<br>configuration from remote<br>tftp server.         | switch# copy tftp://<br>192.168.1.111/test2.cfg<br>startup-config                  |
| copy (startup-con-<br>fig) running-con-<br>fig                | Admin EXEC       | Copy startup configuration<br>to running configuration.                      | switch# copy startupst-config<br>running-config                                    |
| delete (startup-<br>config flash://)                          | Admin EXEC       | Restore factory default and<br>it is equal to command<br>"restore-defaults". | switch# delete backup-config   |
| reset   | Admin EXEC       | Restore factory default of all<br>system.                                    | switch# reset  |
| reset except for<br>[ip-address]<br>[vlan] [user-<br>account] | Admin EXEC       | Restore factory default of all<br>system and keep some set-<br>tings.        | switch# reset except for ip-<br>address  |
| save  | Admin EXEC       |  |  |

## 1.7.4 Firmware Management

**Table 1.31: Firmware Management**

| Function  | Privilege  | Description  | Example   |
|---|------------|--|---|
| boot system<br>(image0 image1)                    | Admin EXEC | Dual image stores a backup image in the flash partition. Use "boot system" command to select the active firmware image. The other firmware image will become a backup. | switch(config)# boot system image1                                  |
| delete system<br>(image0 image1)                  | Admin EXEC | Delete firmware image stored in flash.   | switch# delete system image1  |
| copy (flash://<br> tftp://) (flash:/<br> tftp://) | Admin EXEC | Upgrade/backup firmware image from/to remote tftp server.  | switch# copy tftp://<br>192.168.1.100/vmlinux.bix<br>flash://image0 |

## 1.7.5 DHCP Server

**Table 1.32: DHCP Server**

| Function   | Privilege  | Description   | Example   |
|--|------------|---|---|
| show dhcp-server<br>[lease]  | User EXEC  | Show DHCP server information.<br>Show leased client information.                            | switch# show dhcp-server<br>switch# show dhcp-server lease  |
| [no] dhcp-server   | Admin EXEC | Enable or disable DHCP server.  | switch(config)# dhcp-server   |
| dhcp-server lease-<br>time <60-86400>  | Admin EXEC | Set the lease-time of DHCP server.  | switch(config)# dhcp-server lease-time 16888  |
| dhcp-server global<br>low-ip-address<br>A.B.C.D high-ip-<br>address A.B.C.D<br>subnet-mask<br>A.B.C.D gateway<br>A.B.C.D dns<br>A.B.C.D                    | Admin EXEC | Set allocate IP range, subnet mask, gateway, DNS in global settings of DHCP server.         | switch(config)# dhcp-server global low-ip-address 10.1.1.1 high-ip-address 10.1.2.1 subnet-mask 255.255.0.0 gateway 10.1.1.254 dns 10.1.1.100                     |
| no dhcp-server<br>global   | Admin EXEC | Remove global settings of DHCP server   | switch(config)# no dhcp-server global   |
| dhcp-server inter-<br>face IF_NMLPORT<br>low-ip-address<br>A.B.C.D high-ip-<br>address A.B.C.D<br>subnet-mask<br>A.B.C.D gateway<br>A.B.C.D dns<br>A.B.C.D | Admin EXEC | Set allocate IP range, subnet mask, gateway, DNS in specified port settings of DHCP server. | switch(config)# dhcp-server interface GigabitEthernet1 low-ip-address 11.1.1.1 high-ip-address 11.1.2.1 subnet-mask 255.255.0.0 gateway 11.1.1.254 dns 11.1.1.100 |
| no dhcp-server<br>interfaces<br>IF_NMLPORT   | Admin EXEC | Remove specific port settings of DHCP server.   | switch(config)# no dhcp-server interfaces GigabitEthernet1  |

**Table 1.32: DHCP Server (Continued)**

| <b>Function</b>   | <b>Privilege</b> | <b>Description</b>   | <b>Example</b>  |
|---|------------------|--|---|
| dhcp-server vlan entry <1-8> vlan <1-4094> low-ip-address A.B.C.D high-ip-address A.B.C.D subnet-mask A.B.C.D gateway A.B.C.D dns A.B.C.D | Admin EXEC       | Set allocate IP range, subnet mask, gateway, DNS in specified VLAN settings of DHCP server.      | switch(config)# dhcp-server vlan entry 2 vlan 12 low-ip-address 12.1.1.1 high-ip-address 12.1.2.1 subnet-mask 255.255.0.0 gateway 12.1.1.254 dns 12.1.1.100 |
| no dhcp-server vlan entry <1-8>   | Admin EXEC       | Remove specific VLAN settings of DHCP server.  | switch(config)# no dhcp-server vlan entry 2   |
| dhcp-server option82 entry <1-2> low-ip-address A.B.C.D high-ip-address A.B.C.D subnet-mask A.B.C.D gateway A.B.C.D dns A.B.C.D           | Admin EXEC       | Set allocate IP range, subnet mask, gateway, DNS in specified option 82 settings of DHCP server. | switch(config)# dhcp-server option82 entry 1 low-ip-address 13.1.1.1 high-ip-address 13.1.2.1 subnet-mask 255.255.0.0 gateway 13.1.1.254 dns 13.1.1.100     |
| dhcp-server option82 entry <1-2> circuit-id format ( string   hex ) content WORD<0-120>   | Admin EXEC       | Set circuit ID in specified option 82 settings of DHCP server.                                   | switch(config)# dhcp-server option82 entry 1 circuit-id format string content Hello   |
| dhcp-server option82 entry <1-2> remote-id format ( string   hex ) content WORD<0-120>  | Admin EXEC       | Set remote ID in specified option 82 settings of DHCP server.                                    | switch(config)# dhcp-server option82 entry 1 remote-id format string content World  |
| no dhcp-server option82 entry <1-2>   | Admin EXEC       | Remove specific option 82 settings of DHCP server.   | switch(config)# no dhcp-server option82 entry 1   |

## 1.7.6 DHCP Client

**Table 1.33: DHCP Client**

| <b>Function</b>   | <b>Privilege</b> | <b>Description</b>                                | <b>Example</b>  |
|---|------------------|---|---|
| show dhcp-auto-provision  | User EXEC        | View DHCP-auto-provision status.                  | switch# show dhcp-auto-provision                                |
| [no] dhcp-auto-provision  | Admin EXEC       | Enable or disable DHCP-auto-provision.            | switch(config)# dhcp-auto-provision                             |
| [no] ip dhcp option82   | Admin EXEC       | Enable or disable DHCP option 82 for DHCP client. | switch(config)# ip dhcp option82                                |
| ip dhcp option82 circuit-id format ( string   hex   user-define ) [content WORD<0-120>] | Admin EXEC       | Set circuid-id in DHCP option 82 for DHCP client. | switch(config)# ip dhcp option82 circuit-id format string Hello |

**Table 1.33: DHCP Client (Continued)**

| <b>Function</b>  | <b>Privilege</b> | <b>Description</b>                                  | <b>Example</b>   |
|--|------------------|---|--|
| ip dhcp option82<br>remote-id format (<br>string   hex  <br>user-define )<br>[content WORD<0-<br>120>] | Admin EXEC       | Set remote-id in DHCP<br>option 82 for DHCP client. | switch(config)# ip dhcp<br>option82 remote-id format<br>string World |

## 1.7.7 System Log (SYSLOG)

**Table 1.34: System Log (SYSLOG)**

| <b>Function</b>  | <b>Privilege</b> | <b>Description</b>   | <b>Example</b>   |
|--|------------------|--|--|
| show logging   | User EXEC        | Display the global logging status.   | switch# show logging   |
| show logging<br>(buffered file)  | User EXEC        | Display log of buffer or file.   | switch# show logging buffered  |
| clear logging<br>(buffered file)   | Admin EXEC       | Clear logging information.   | switch# clear logging buffered   |
| [no] logging   | Admin EXEC       | Disable or enable logging service.   | switch(config)# logging  |
| logging host<br>(A.B.C.D HOST-<br>NAME) [port <0-<br>65535>] [severity<br><0-7>] [facility<br>(local0 local1 loc<br>al2 local3 local4 <br>local5 local6 loca<br>l7)] | Admin EXEC       | Set remote log server information and specify the minimum severity mask and facility of logging message. | switch(config)# logging host<br>192.168.1.100 severity 6 facility local0 |
| logging (buff-<br>ered con-<br>sole file)<br>[severity <0-7>]  | Admin EXEC       | Enable logging into buffer or console of file and specify the minimum severity mask of logging message.  | switch(config)# logging buff-<br>ered severity 6                         |
| no logging (buff-<br>ered console file)  | Admin EXEC       | Disable logging into buffer or console or file.  | switch(config)# no logging buff-<br>ered                                 |
| no logging host<br>(A.B.C.D HOSTNAME)  | Admin EXEC       | Remove remote log server.  | switch(config)# no logging host<br>192.168.1.100                         |

## 1.7.8 System Time

**Table 1.35: System Time**

| <b>Function</b>              | <b>Privilege</b> | <b>Description</b>  | <b>Example</b>   |
|------------------------------|------------------|---|--|
| clock source<br>(local sntp) | Admin EXEC       | Set the source of time. Use the no form of this command to default setting. | switch(config)# clock source<br>sntp<br>switch(config)# show clock<br>detail<br>08:32:12 test(UTC+5) Sep 21<br>2012<br>No time source<br>Time zone:<br>Acronym is DFL<br>Offset is UTC+8 |

**Table 1.35: System Time**

| <b>Function</b>  | <b>Privilege</b> | <b>Description</b>   | <b>Example</b>  |
|--|------------------|--|---|
| clock timezone<br>ACRONYM HOUR-OFF-SET [minutes <0-59>]  | Admin EXEC       | Use the clock timezone command to set timezone setting.  | switch(config)# clock timezone test +5<br>switch(config)# show clock detail<br>10:13:27 test(UTC+5) Sep 21 2012<br>No time source<br>Time zone:<br>Acronym is test<br>Offset is UTC+5 |
| no clock timezone  | Admin EXEC       | Use the no form of this command to timezone default setting.                                       | switch(config)# no clock timezone   |
| sntp host HOST-NAME [port <1-65535>]   | Admin EXEC       | Use the clock set command to set static time.<br>The static time won't save to configuration file. | switch# clock set 11:03:00 sep 21 2012<br>11:03:00 DFL(UTC+8) Sep 21 2012   |
| no sntp  | Admin EXEC       | Use the no form of this command to restore sntp default setting.                                   | switch(config)# no sntp   |

## 1.7.12 IP Configuration

**Table 1.39: IP Configuration**

| <b>Function</b>                   | <b>Privilege</b> | <b>Description</b>   | <b>Example</b>  |
|-----------------------------------|------------------|--|---|
| ip address A.B.C.D [mask A.B.C.D] | Admin EXEC       | Use "IP address" command to modify administration IPv4 address.                    | switch(config)# ip address 192.168.1.200 mask 255.255.255.0 |
| ip default-gateway A.B.C.D        | Admin EXEC       | Use "IP default-gateway" command to modify default gateway address.                | switch(config)# ip default-gateway 192.168.1.100            |
| no ip default-gateway             | Admin EXEC       | Use "No IP default-gateway" to restore default gateway address to factory default. | switch(config)# no ip default-gateway                       |
| ip dns A.B.C.D [A.B.C.D]          | Admin EXEC       | Use "IP DNS" command to modify DNS server address.                                 | switch(config)# ip dns 111.111.111.111                      |
| no ip dns A.B.C.D                 | Admin EXEC       | Use "No IP DNS" to delete existing DNS server.                                     | switch(config)# no ip dns 111.111.111.111                   |

## 1.7.13 TELNET

Table 1.40: TELNET

| Function       | Privilege  | Description   | Example                      |
|----------------|------------|---|------------------------------|
| ip telnet      | Admin EXEC | Use "IP service" command to enable telnet services. | switch(config)# ip telnet    |
| [no] ip telnet | Admin EXEC | Use no form to disable service.                     | switch(config)# no ip telnet |

## 1.7.14 SSH

Table 1.41: SSH

| Function    | Privilege  | Description                                      | Example                   |
|-------------|------------|--|---------------------------|
| ip ssh      | Admin EXEC | Use "IP service" command to enable ssh services. | switch(config)# ip ssh    |
| [no] ip ssh | Admin EXEC | Use no form to disable service.                  | switch(config)# no ip ssh |
| show ip ssh | User EXEC  | Show current ssh service status.                 | switch# show ip ssh       |

## 1.7.15 HTTP

Table 1.42: HTTP

| Function                                  | Privilege  | Description  | Example   |
|---|------------|--|---|
| ip http                                   | Admin EXEC | Use "IP service" command to enable http services.  | switch(config)# ip http   |
| ip https                                  | Admin EXEC | Use "IP service" command to enable https services.   | switch(config)# ip https  |
| [no] ip https                             | Admin EXEC | Use no form to disable service.  | switch(config)# no ip http  |
| [no] ip http                              | Admin EXEC | Use no form to disable service.  | switch(config)# no ip http<br>switch(config)# no ip https                                 |
| show ip (http https)                      | User EXEC  | Show current https or http service status.   | switch# show ip https   |
| ip (http https) session-timeout <0-86400> | Admin EXEC | Use "IP session-timeout" command to specify the session timeout value for http or https service. | switch(config)# ip http session-timeout 15<br>switch(config)# ip https session-timeout 20 |

## 1.7.16 Modbus TCP

Table 1.43: Modbus TCP

| Function                | Privilege | Description                             | Example                         |
|-------------------------|-----------|---|---------------------------------|
| show tcp-modbus status  | User EXEC | Show current TCP-modbus status.         | switch# show tcp-modbus status  |
| show tcp-modbus timeout | User EXEC | Show current TCP-modbus timeouts value. | switch# show tcp-modbus timeout |

**Table 1.43: Modbus TCP (Continued)**

| <b>Function</b> | <b>Privilege</b> | <b>Description</b>   | <b>Example</b>  |
|-----------------|------------------|--|---|
| [no] tcp-modbus | Admin EXEC       | Use "TCP-modbus" command to enable TCP modbus services.<br>Use no form to disable service. | switch(config)# tcp-modbus<br>switch(config)# no tcp-modbus |

## 1.7.17 IXM

**Table 1.44: IXM**

| <b>Function</b> | <b>Privilege</b> | <b>Description</b>   | <b>Example</b>                                |
|-----------------|------------------|--|---|
| [no] ixm        | Admin EXEC       | Use "IXM" command to enable IXM services.<br>Use no form to disable service. | switch(config)# ixm<br>switch(config)# no ixm |

# 1.8 Diagnostic

## 1.8.1 Cable Diagnostic

**Table 1.45: Cable Diagnostic**

| <b>Function</b>                        | <b>Privilege</b> | <b>Description</b>   | <b>Example</b>  |
|--|------------------|--|---|
| show cable-diag interfaces IF_NMLPORTS | User EXEC        | Display the estimated length of copper cable attached to the ports.<br>Show cable-diag interface all.<br>Display the estimated length of copper cables attached to all ports.<br>show cable-diag interface | This example show the cable's information which link in gi1.<br>switch(config)# show cable-diag interfaces gi1<br>Port   Speed   Local pair   Pair length   Pair status<br>----- + ----- + ----- + -----<br>----- + -----<br>gi1   auto   Pair A   0.88<br>  Open<br>  Open   Pair B   0.87<br>  Open   Pair C   0.82<br>  Open   Pair D   0.82<br>  Open |

## 1.8.2 DMI

**Table 1.46: DMI**

| <b>Function</b>               | <b>Privilege</b> | <b>Description</b>   | <b>Example</b>   |
|-------------------------------|------------------|--|--|
| show dmi IF_PORTS information | Admin EXEC       | Use this command to display the information of EEPROM and Digital Diagnostic Monitoring Interface in SFP Optical Transceivers. | This example show SFP Optical Transceivers information which plug-in fa10.<br>switch# show dmi FastEthernet 10 information |

**Table 1.46: DMI (Continued)**

| <b>Function</b>  | <b>Privilege</b> | <b>Description</b>   | <b>Example</b>   |
|--|------------------|--|--|
| [no] dmi<br>(alarm warning)<br>(tempera-<br>ture voltag txba-<br>sis txpower rxe-<br>r) (high low)<br>state      | Admin EXEC       | Use this command to enable/disable the mechanism that monitors SFP Optical Transceiver's Digital Diagnostic Monitoring interface information.<br><br>Use no form to disable warning/alarm mechanism. | This example shows how to enable temperature's high threshold monitor mechanism with alarm level. (Current sfp plug-in in fa10).<br>switch(config)# interface FastEthernet 10<br>switch(config-if)# dmi alarm temperature high state |
| dmi (alarm warn-<br>ing) (tempera-<br>ture voltag txbasi<br>s txpower rxe-<br>r) (high low) value<br>INPUT_VALUE | Admin EXEC       | Use this command to configure high/low threshold value used to compare with SFP Optical Transceiver's Digital Diagnostic Monitoring interface's value (temperature, voltage, etc).                   | This example shows how to configure the temperature high threshold value is 30.5 with alarm level.<br>switch(config-if)# dmi alarm temperature high value 30.5   |
| [no] dmi alarm-<br>warning message<br>(log snmp mail)  | Admin EXEC       | Use this command to determine which method to use when notifying of user alarm/warning events.   | This example shows how to configure alarm-warning message is system log.<br>switch(config)# dmi alarm-warning message log  |

### 1.8.3 IP-based Diagnostic

**Table 1.47: IP-based Diagnostic**

| <b>Function</b>  | <b>Privilege</b> | <b>Description</b>  | <b>Example</b>  |
|--|------------------|---|---|
| ping HOSTNAME<br>[count <1-5>]<br>[interval <1-5>]<br>[size <8-5120>]  | User EXEC        | Use "ping" command to do network ping diagnostic.                           | switch# ping 192.168.1.100 count 4 interval 4 size 128  |
| ping6 HOSTNAME<br>[count <1-5>]<br>[interval <1-5>]<br>[size <8-5120>] | User EXEC        | Use "ping6" command to carry out network ping diagnostic.                   | switch# ping6 192.168.1.100 count 4 interval 4 size 128 |
| show arp   | User EXEC        | Use "show arp" command to show all arp entries.                             | Switch# show arp  |
| clear arp<br>[A.B.C.D]   | Admin EXEC       | Use "clear arp" command to clear all arp entries or one specific arp entry. | Switch# clear arp                                       |

### 1.8.4 PoE

**Table 1.48: PoE**

| <b>Function</b>             | <b>Privilege</b> | <b>Description</b>   | <b>Example</b>   |
|-----------------------------|------------------|--|--|
| show poe (sys-<br>tem port) | User EXEC        | Use "show poe (system port)" command to show current POE setting value and status. | This example shows current poe status per port.<br>switch# show poe port |

**Table 1.48: PoE (Continued)**

| <b>Function</b>  | <b>Privilege</b> | <b>Description</b>  | <b>Example</b>  |
|--|------------------|---|---|
| poe  | Admin EXEC       | Use POE command to enter POE's control level.   | This example shows how to enter POE control level.<br>switch# configure<br>switch(config)# poe<br>switch(config-poe)#{/p}   |
| system powerlimit <0-800>                                      | Admin EXEC       | Use "system powerlimit" command to configure how much power can be used in entire system.   | This example shows how to configure whole system available power to 720W.<br>switch(config-poe)# system power-limit 120   |
| system ac-disconnect (enable disable)                          | Admin EXEC       | Use ac-disconnect command to determine which disconnect type will be selected.  | This example shows how to configure disconnect type to DC typeswitch(config-poe)#{. system ac-disconnect disable  |
| system overload-disconnect (port-priority overload-port-first) | Admin EXEC       | Use system overload-disconnect command to determine which POE port will supply power when the total power is at full load.<br><br>There are two algorithms supported, and this command allows selection of the algorithm. | This example shows how to select overload-port-first to be the overload-disconnect's algorithm.<br>switch(config-poe)# system overload-disconnect overload-port-first |
| interfaces IF_NMLPORT legacy-mode (enable disable)             | Admin EXEC       | Use "legacy-mode (enable disable)" command to configure supply power mechanism to legacy mode in POE port.  | This example shows how to configure fa1's POE power to legacy mode.<br>switch(config-poe)# interfaces FastEthernet 1 legacy-mode enable                               |
| interfaces IF_NMLPORT state (enable disable)                   | Admin EXEC       | Use "state (enable disable)" command to configure whether POE port will supply power or not.  | This example shows how to stop POE port supply power via fa1.<br>switch(config-poe)# interfaces FastEthernet 1 state disable  |
| interfaces IF_NMLPORT plfc (enable disable)                    | Admin EXEC       | Use "plfc (enable disable)" command to configure how much power POE port will supply based on PD's class level.   | This example shows how to configure fa1's poe supply power mode to plfc(power-limit from class).<br>switch(config-poe)# interfaces FastEthernet 1 plfc enable         |
| interfaces IF_NMLPORT priority (low medium high critical)      | Admin EXEC       | Use "priority (low medium high critical)" command to configure POE port's priority of power supply sequence.  | This example shows how to configure fa1 as the most high priority level in power supply sequence.<br>switch(config-poe)# interfaces FastEthernet 1 priority critical  |
| interfaces IF_NMLPORT power-limit <0-30000>                    | Admin EXEC       | Use "power-limit <0-30000>" command to configure how much power can be used via POE port.   | This example shows how to configure fa1's power of POE to 15W.<br>switch(config-poe)# interfaces FastEthernet 1 power-limit 15000                                     |

## 1.8.5 LED

**Table 1.49: LED**

| Function  | Privilege  | Description   | Example   |
|---|------------|---|---|
| show led  | User EXEC  | Use "show LED" command to show current LED event status and error times.  | This example shows current LED event and its own error times.<br>switch# show led<br>( ALARM LED ) EVENTS   STATUS   ERROR TIMES<br>----- + ----- +<br>Power Failure  <br>ERROR   1<br>----- + ----- +<br>----- |
| [no] led (alarm   system)                                       | Admin EXEC | Use "LED (alarm   system)" command to configure LED indication mechanism.<br><br>Use no form to disable LED indication mechanism configuration.   | This example shows how to configure enable alarm LED indication mechanism.<br>switch(config)# led alarm   |
| [no] led (alarm   system) (power-failure   fiber-down   always) | Admin EXEC | Use "(power-failure   fiber-down   always)" command to configure which event will be binding with which LED indication mechanism.<br><br>Use no form to remove event from LED indication mechanism. | This example shows how to add the event fiber-down to alarm LED indication mechanism.<br>switch(config)# led alarm fiber-down   |
| led system blink interval <0-3>                                 | Admin EXEC | Use "LED system blink interval" command to configure how long system LED will blink for.  | This example shows how to configure system LED blink interval.<br>switch(config)# led system blink interval 3   |

## 1.8.6 System

**Table 1.50: System**

| Function      | Privilege  | Description  | Example              |
|---------------|------------|--|----------------------|
| show version  | User EXEC  | Use "show version" command to show loader and firmware version and build date. | switch# show version |
| show info     | User EXEC  | Use "show info" command to show system summary information.                    | switch# show info    |
| reboot        | Admin EXEC | Use "reboot" command to make system hot restart.                               | switch# reboot       |
| show language | User EXEC  |  |                      |
| show flash    | User EXEC  | Use "show flash" command to show all files" status which stored in flash.      | switch# show flash   |

**Table 1.50: System (Continued)**

| Function  | Privilege  | Description   | Example  |
|---|------------|---|--|
| clear line telnet   | Admin EXEC |   |  |
| terminal length <0-24>  | User EXEC  |   |  |
| show network-port   | User EXEC  | Show network port information.  | switch(config)# no network-port type http            |
| [no] network-port type<br>(http https telnet ssh)               | Admin EXEC | Use no form to restore default value.                                       |  |
| network-port type<br>(http https telnet ssh) port-num <1-65535> | Admin EXEC | Use the command to change network port.                                     | switch(config)# network-port type http port-num 8080 |
| system name NAME  | Admin EXEC | Use "system name" command to modify system name information of the switch.  | switch(config)# system name myname                   |
| system location LOCATION  | Admin EXEC | Use "system contact" command to modify contact information of the switch.   | switch(config)# system contact callme                |
| system contact CONTACT  | Admin EXEC | Use "system location" command to modify location information of the switch. | switch(config)# system location home                 |
