Introduction

The EKI-9512 series Ethernet switch is designed for railway applications with rugged housing and high EMC performance. The EKI-9512 series is a suitable networking solution for rolling stock and wayside applications. It provides M12 connectors for Ethernet/ console/ relay/ power-input(M23) connections to ensure tight and robust connectivity, guarantees reliable operation against environmental disturbances, and complies with IEC61373 vibration and shock for rolling stock applications. The portfolio of EKI-9512 series provides 8 different options, catering to various user requirements. It provides 12-ports on different port configuration (please refer to the ordering information). With IEEE802.3af/at PoE functionality (PoE model only), it provides up to a 150 watt power budget (depends on different input voltage, please refer to PoE Total Power Budget) for P.D. devices (such as camera, IP-phone and wireless access point). The EKI-9512 series features IP67 housing and ample pitch connectors that can easily connect/ disconnect cables without interference; reducing human errors within harsh and narrow industrial environments.
