RJ45 to DB25 Terminal cable configuration

For standard terminal operating at slow speeds or using software flow control. A simple 3-pin connection can be used.

RJ45		DB25 Terminal	
S/GND	4 -----	7	S/GND
TXD	5 -----	3	RXD
RXD	6 -----	2	TXD

RJ45 to DB25 terminal with hardware flow control

For terminals operating at speeds high than 9600 baud or for terminals which do not support software flow control. Terminal supports DTR flow control.

RJ45		DB25 Terminal	
S/GND	4 -----	7	S/GND
TXD	5 -----	3	RXD
RXD	6 -----	2	TXD
CTS	7 -----	5	CTS
RTS	8 -----	20	DTR

RJ45 to DB25 terminal using the modem device

Using the modem device on a local connection ensures that the login process is killed when the terminal is switched off.

This is achieved by wiring the terminals RTS or DTR to the RJ45 DCD.

RJ45		DB25 Terminal	
DCD	1 -----	20	DTR or 4 RTS
S/GND	4 -----	7	S/GND
TXD	5 -----	3	RXD
RXD	6 -----	2	TXD

RJ45 to DB25 terminal using the modem device and hardware flow control

Using the modem device on a local connection ensures that the login process is killed when the terminal is switched off. This is achieved by wiring the terminals RTS to the RJ45 DCD.

RJ45		DB25 Terminal	
DCD	1 -----	20	DTR or 4 RTS
S/GND	4 -----	7	S/GND
TXD	5 -----	3	RXD
RXD	6 -----	2	TXD

This example assumes that DTR on the terminal is being used for hardware flow control. If RTS is used for hardware flow control connect DTR on the terminal to DCD on the RJ45 and RTS on the terminal to RTS on the RJ45
