V462

⠿ Overview

The V462 embedded computer is based on the AMD x86 processor, and features 4 serial ports, dual LAN ports, 4 USB 2.0 hosts, and CompactFlash and PCMCIA sockets. A VGA interface is included, making the V462 particularly well-suited for industrial applications such as SCADA and factory automation.
The V462's 4 serial ports can be used to connect a wide range of serial devices, and the dual 10/100 Mbps Ethernet ports offer a reliable solution for network redundancy, promising continuous operation for data communication and management. In addition, the CompactFlash, PCMCIA, and USB sockets provide the V462 with the reliability needed for industrial applications that require data buffering and storage expansion.
The V462 comes with the WinCE 6.0 or WinXP Embedded operating system already installed. WinCE 6.0 or WinXP Embedded provides programmers with a friendly environment for developing sophisticated, bug-free application software at a lower cost.
